for. Q: How do I stop using
stable_sort (or exchange)?
Currently, I have written this
piece of code: void
stable_sort(int* vals, size_t
size) { stable_sort(vals, size,
>); } It's used for sorting (an
array of integers). I have read
the documentation of
stable_sort(). It says that to
use it, I must pass the

comparator as the third parameter (I use void as second parameter). Now my question is what if I don't want to use the `stable_sort()` function? (it is because in my implementation, it uses `sort()` function). So, how can I disable this third parameter, and use the second parameter with two pointers? Edit: The entire code is: `void stable_sort(int* vals, size_t size) { size_t max_num = vals[size - 1] + size; int* temp; int* current_min =`

Originally, Stuart wrote a number of historical fiction books, but when he decided to go the science fiction/fantasy direction his talent bloomed and he is now one of the most prolific and most acclaimed writers in the genre. Although some of his books have been written with historical time lines and used historical elements (e.g., Cold Peace and Deadlock), most of his novels have taken place in the future—sometimes far future—and he has taken a bold leap into new territory in the Dark planet series. In the Dark planet series, the protagonist, Dylan Hunt, has set out to solve the mystery of a missing planet which threatens the galaxy as well as the solar system, and also to resolve a personal issue which was left unresolved in previous series.
